RMC **RMC***	Denotes that the refrigerated cargo installation of a ship has been classed with the British Corporation. The * signifies that the installation was constructed under the supervision of the surveyors.
	When the RMC class and class notation are shown in parentheses, this indicates that the class has been temporarily suspended.
‡	Denotes that the installation was designed to reduce the temperature of non-precooled cargoes and has been considered by the Society for this purpose. A statement showing the cargo cooling capabilities of the installation, in respect of stated weights and descriptions of cargoes under stated conditions, will be issued on application by the owners to the Society's Head Office.
SRMC	Special Survey of the refrigerated cargo installation.
CSI	Continuous Survey of Insulation.

Cargo Chambers	Total capacity in cubic feet. The capacity is measured from the face of overhead, 'tween deck and tank top insulation lining, or the surface of 'tween decks where uninsulated; or from the face of brine pipes or air ducts; from the face of permanent cargo battens or air screens or air coolers or casings. Deductions are made for floor gratings which are part of the air circulation system, for pillars, stanchions and other fixtures which interfere with the cargo-carrying capacity, but not for loose or portable floor dunnage, or for portable bins or trays and their supports.
